#### **INTRODUCTION**

The Uganda Livestock Identification and Traceability System (U-LITS), is a groundbreaking Uganda-designed initiative designed to revolutionize the management, productivity and market access of livestock across Uganda. The U-LITS App represents a cutting-edge solution that integrates advanced information technology [IT] enabling comprehensive data management, and regulatory compliance to improve livestock productivity, enhance market access, enable sanitary/welfare certification, and strengthen the agricultural sector's sustainability and resilience.

Capitalizing on the speed and accuracy afforded by the use of radio frequency identification [RFID], a real-time and accessible U-LITS data management system (DMS) is created containing four livestock registers – Livestock Holdings [LHR], Livestock Data [LDR], Livestock Events [LER] and Livestock Movement Permit [LMPR]. The traceability data and sanitary history, inclusive of FMD vaccination, held within these registers provide easily accessed and accurate information for veterinary authority e-certification of any registered animal in compliance with international standards. The registers also provide key data for dairy, beef, and heifer management apps enabling improved livestock productivity

The main roles of the Veterinary Authority are the registration of Livestock Holding Grounds (LHCs), validating Livestock Data [LDR] and Livestock Event [LER] Registers, approving, pending and/or rejecting a livestock movement permit, and creating key events such as declaring a disease outbreak like FMD, etc. Another role that can be performed at the Web interface is placing all registered Livestock in a district under quarantine in response to an infectious disease outbreak. The registration of Livestock Holdings is a function of the Sub County [S/C] VOs to create S/C Livestock Holding,S/C Livestock Data, and Livestock Events Registers [LHR, LDR and LER]. Data from these registers are forwarded to the DVO to form District Livestock Registers who in turn forward the compiled data to the CVO to form the National Livestock registers.
